
Autodesk Revit 2013 32 Bit 12

[Download](#)

Hi, I'm trying to install Revit 2014 (student copy) on my laptop. Since the laptop has an older Core 2 Duo processor, the device cannot do this. It installs successfully with "Install Revit 2014" by default, but then when trying to install the tool to link to Revit, it gives the error "Unable to create installation folder". I would like a hint on how to create this tool. If it's not on your computer and you only have a laptop, I'd like a hint on how to create one. What do I need to do to install the link tool when I installed Revit 2014
